Note: Because multiple Skill Scan scores are needed to calculate your students' growth over time, this pane will be empty at the beginning of the school year; data will appear once your students have take the measure two or more times (remember, it is served up monthly).

- 3. Study the **Skill View** section within the **Students** tab of your **Teacher Dashboard**, and notice if there are any patterns across your student performance. Some examples of where to begin:
  - Are some, or many, of your students working on below grade level content in the same skill domain?
  - What are your class's strengths (skill domains in which most students are working on content on or above grade level)?
  - What skill domains are nearly all of your students working on?
  - How might you pair students according to their skill domain strengths or weaknesses?
- 4. Take a deep-dive into the Student Detail View for at least two students: one highperforming student, and one who is making below-typical growth or encountering trouble spots.

If you believe the information would be useful for their families, print their **Caregiver Reports**!
